

Installation Instructions

WARNING:

You need help from a professional electrician for the installation of our led shelves.

HOFINASHOP

1. Preliminary Considerations for Standard Shelving Installation instructions

1.1. Safety

Proper safety equipment includes:

Safety Glasses

Work Gloves

Work Shoes

Tools and materials

- Spirit level
- Drill
- Phillips head drill bit
- Pencil
- Tape measure
- Stud finder
- Flexi Storage floating shelf kit - includes shelf - bracket and fixings
- Eye protection

REQUIRED TOOLS:

Tape Measure

Level

Drill/
Driver

#2 Phillips
Screwdriver

Stud Finder

Pencil

12V DC Adapter

or

12V DC Transformer

Steps

In the package we have sent you, there is approximately a 150-centimeter cable that you can connect to a transformer or adapter.

As the first option, you can start using this cable by purchasing a 12V DC adapter compatible with the plug, which you can easily find at any electronics store. An example adapter is shown below:

Electronics > Power Accessories > AC Adapters

Furthermore, our installation instructions are as follows.

Step 1: Gather your tools and materials

Below are all of the tools and materials you'll need to complete this project.

Step 2: Work out where you want your floating shelf to go

Before you do anything else, figure out where you'd like to hang your floating shelf. Once you've got a spot in mind, use a stud finder to locate any wall studs – this is where you'll want to fix your bracket. Stud finders are great – just run them along with flush to the wall, hold down the sides and they'll beep when you've located a stud. You can also set them to check for wires – handy if you're putting your shelf up near a TV or any wall sconces. If your bracket doesn't line up with a stud – no worries! The kit we're using comes with extra wallmates.

Step 3: Measure up

Use a spirit level to make sure you hang your bracket straight – once the bubble is in the center, you're good to go. Draw a horizontal line on the wall and mark up your holes with a pencil, including the all-important central hole.

Step 4: Screw-in your bracket

Drill a hole into that center point (between your wall studs) and screw one of your wallmates into position. Once you've done this, grab one of your kit's screws and drill straight through the Wall mate – then you're good to screw in the remaining screws to each end. Use your level again to check everything's still straight.

Step 5: Slide your shelf on

Place your shelf carefully by placing it on the bars on the wall. Make sure you assemble the shelf well and the shelf is well positioned.

Step 6: Admire your handwork

You're ready to style! Floating shelves look great as bookshelves or as displays for photos or keepsakes. Get creative!
